Homes should be a haven, not a hospital

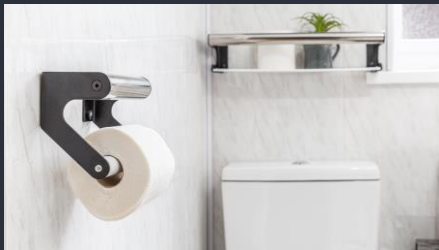

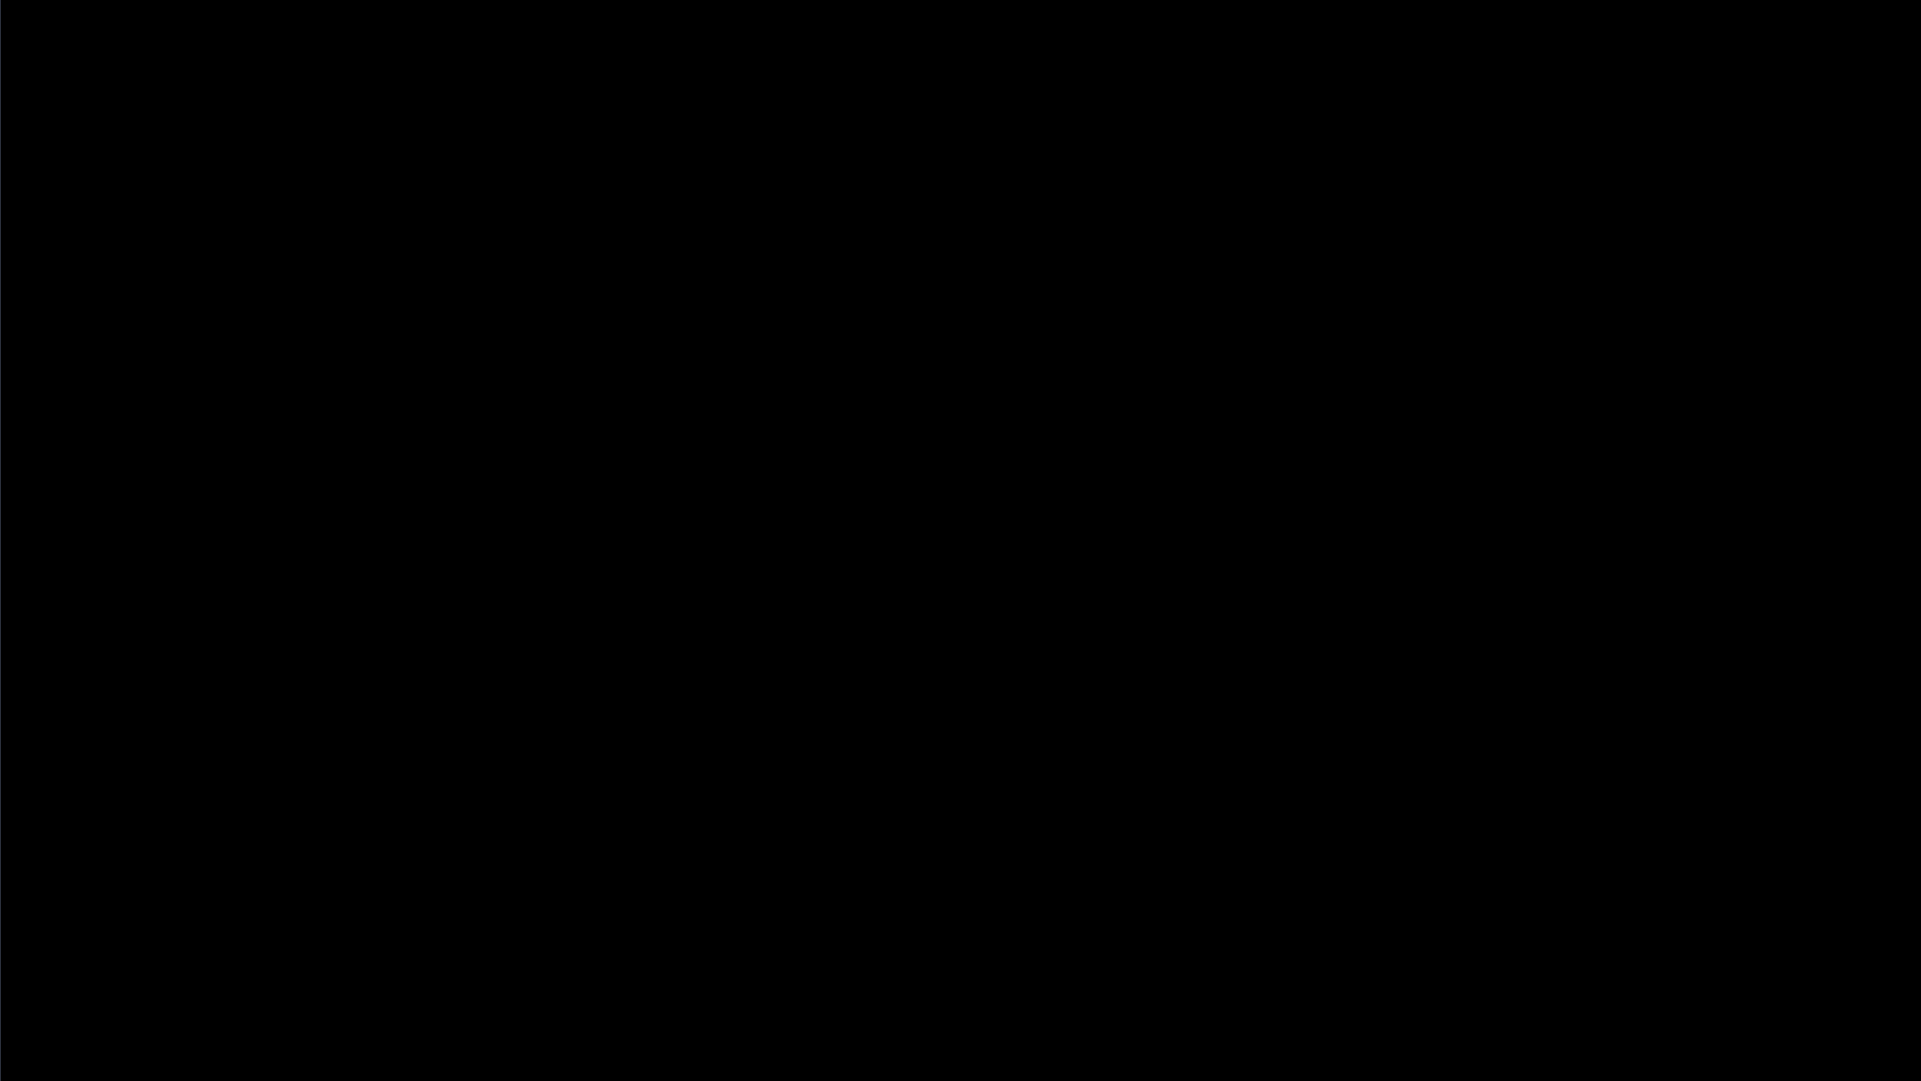

Moving to a better model

Kelly - "It makes me happy to know I can use my house a little more independently, and that my house doesn't scream 'disabled' even though I have lots of grab rails to help me."

**FIT FOR OUR
FUTURE**

Fit for our Future is a campaign to change the perception and delivery of aids and adaptations.

We want everyone to have a home that's sustainable, safe and promotes dignity as their needs change.

Every home adaptation is an opportunity to make a difference

Well-planned, discreet and attractive aids and adaptations will encourage people to seek help sooner, allow them to live safely and comfortably in their homes for longer and save costs on health and social care.
