UNDERSTANDING THE HOUSING PREFERENCES OF OLDER PEOPLE

Ipsos and Housing LIN

March 2025

Contents

RESEARCH OVERVIEW AND METHODOLOGY

Research overview

The primary objective of the study is to create the most up to date, robust and comprehensive evidence base in the UK of the housing needs and aspirations of the older population.

- The study is comprised of two stages:
 - Stage 1 aims to provide up to date and robust evidence on the current and future housing preferences of the older population in the UK, including the experiences, preferences, and requirements of people currently aged 50 and over.
 - Stage 2 of the study draws on the evidence base derived from Stage 1 and other evidence to create a new model for estimating the need for different types of housing and accommodation for older persons.
- This evidence will inform and support policy makers and housing providers to help plan and deliver transformation in the UK housing market to best deliver suitable housing and accommodation choices for the older population.

Methodology – Ipsos UK KnowledgePanel

- Survey undertaken via the Ipsos UK
 KnowledgePanel, an online panel of UK adults that uses random probability sampling
- Random stratified sample of 8,851 panellists in United Kingdom (aged 50+) were invited to take part and 5,591 completed – response rate of 63%
- Data weighted to be **representative of the adult population aged 50** or more within each country
- Fieldwork conducted: 7-13th December 2023

OLDER PEOPLE'S CURRENT HOUSING SITUATION

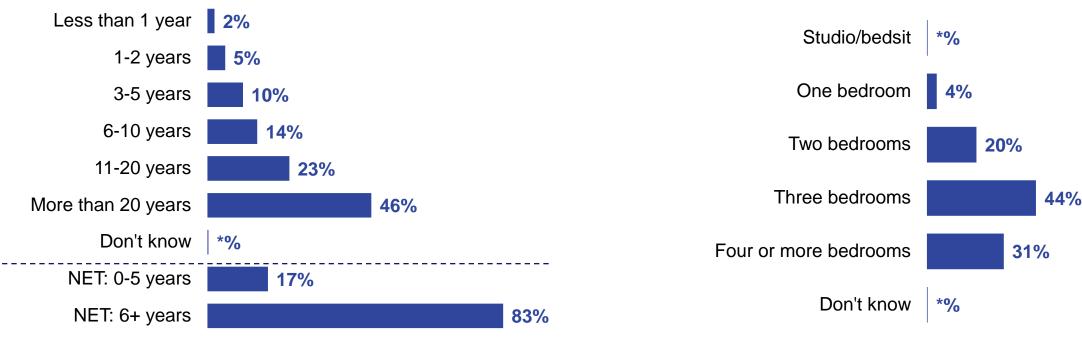

The majority of older people are owner-occupiers living in conventional housing

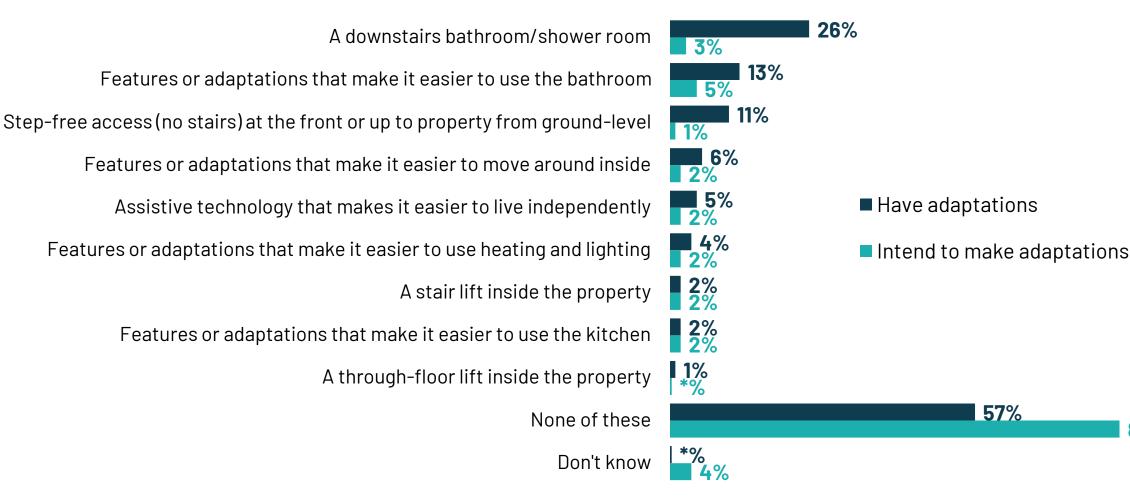

97% live in a conventional home

 84% owner-occupiers (66% outright and 18% mortgage)
 14% rent (9% social and 5% private)

Over half of older people had no adaptions and 8 in 10 said they did not intend to make any adaptations in the next 5 years

09a. Does your current home have any of the following adaptations?

09b. Do you intend to make any of the following adaptations to your current home in the next 5 years or so?

57%

84%

Over 8 in 10 of those aged 50+ said they were satisfied with their current home

I feel safe and secure in my current home

The location of my current home is convenient for my needs

My current home is suitable for my needs

- I am satisfied with the size and the layout of my current home
 - The maintenance and upkeep of my current home are manageable
- I worry my current home will be too expensive to keep warm in winter
- My current home will not be suitable if my/my households needs change in the future

Disagree

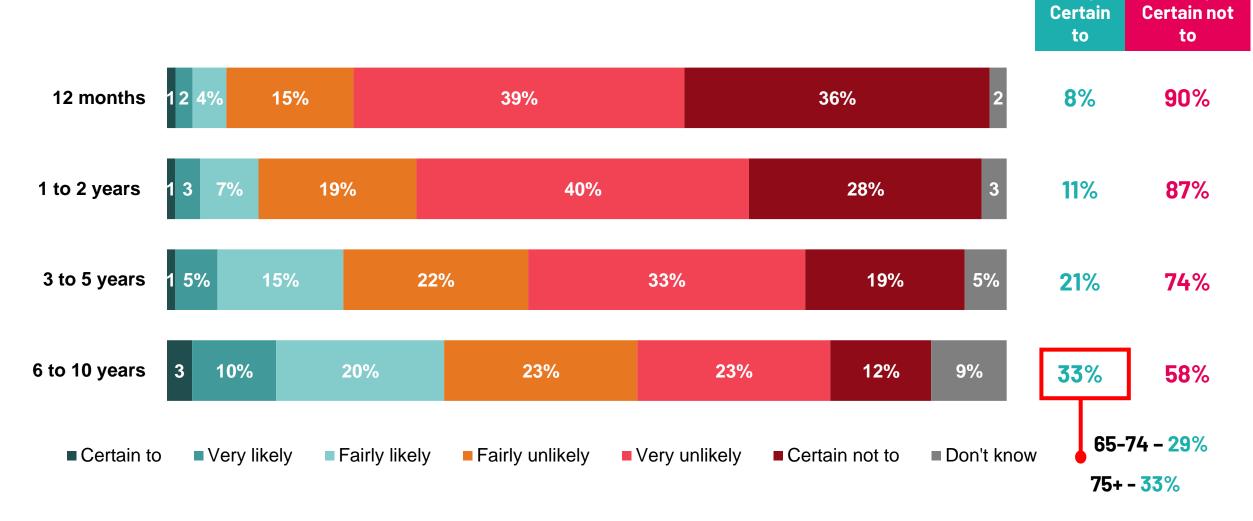

PROPENSITY TO MOVE AND PREFERENCES

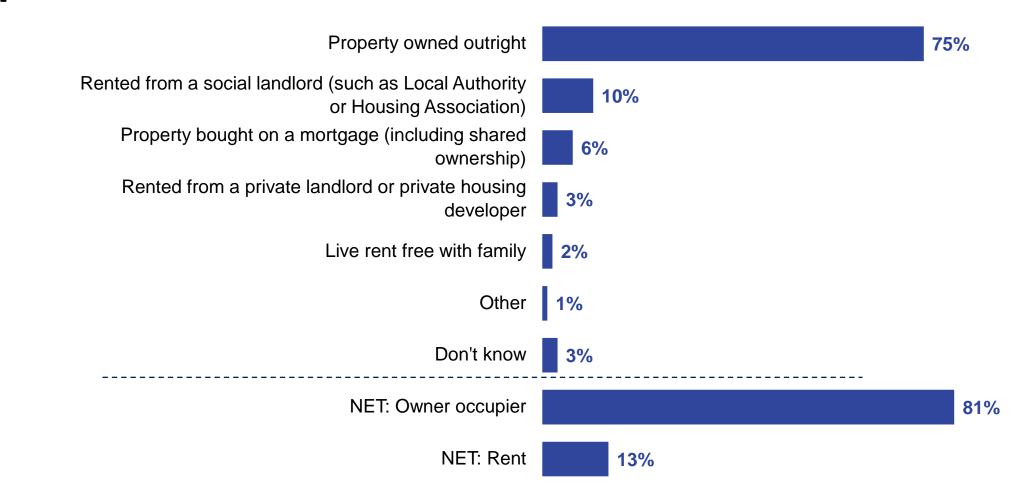

Likelihood of moving increases with time, however, the majority still say they are unlikely to move in the next 6-10 years

Q18. How likely or unlikely are you to move to a different home in the next ...?

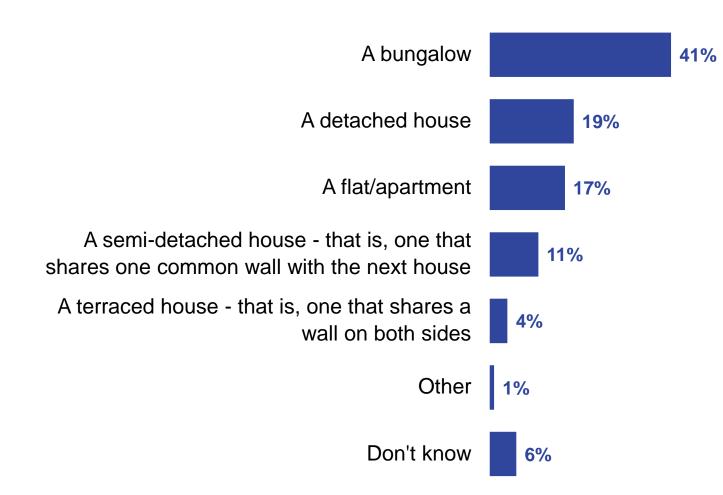

Current tenure was a strong influence on future tenure expectations

Q21. Regardless of whether you are likely to move or not, if you did move to a different home in the future, which one of these would you expect it to be?

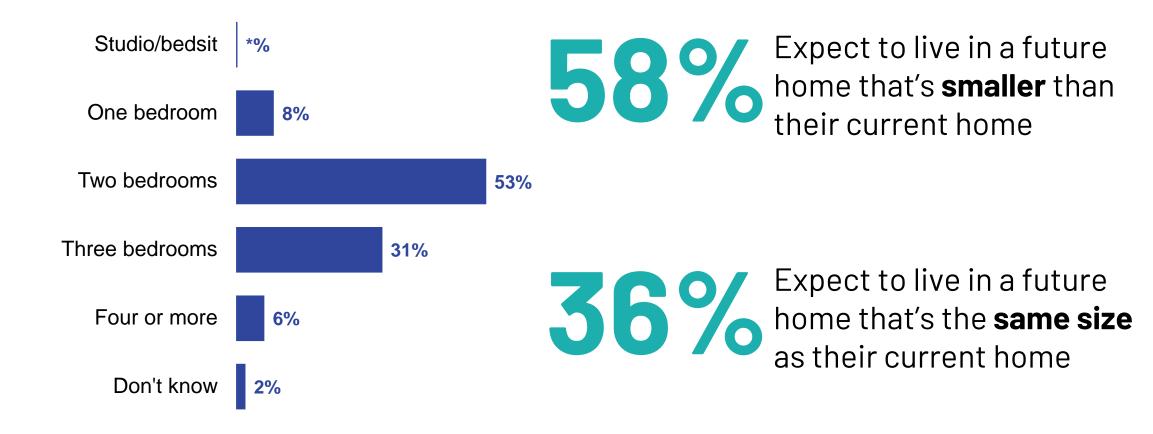

Bungalows are most popular across all age cohorts

Q20. Regardless of whether you are likely to move or not, if you did move to a different home in the future, which one of these would you expect it to be?

Most older people expect to live in a home with two or three bedrooms

Q19. Regardless of whether you are likely to move or not, if you did move to a different home in the future, how many bedrooms would you expect it to have?

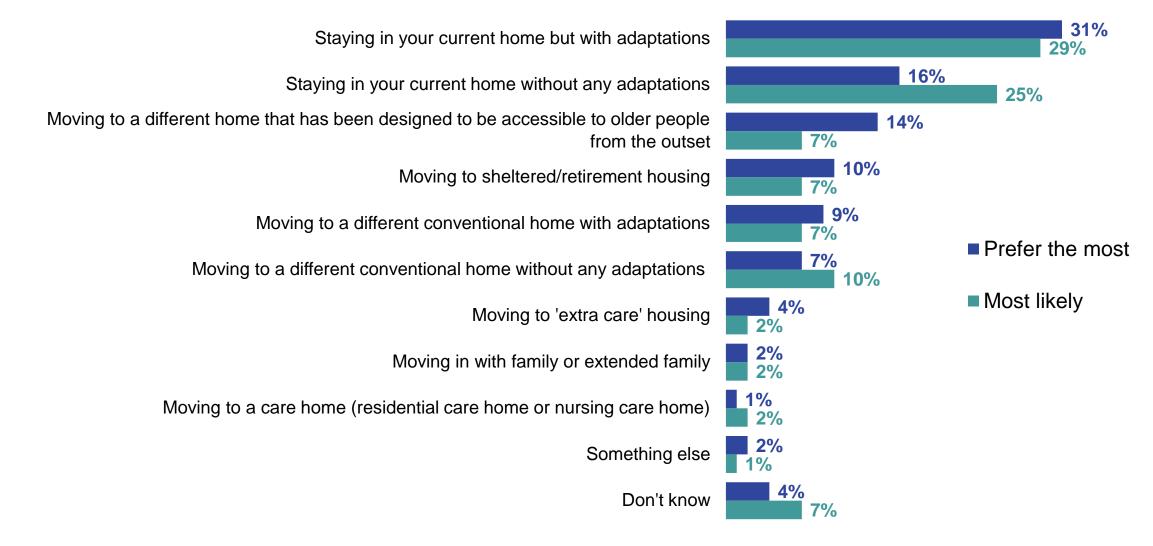

FUTURE HOUSING OPTIONS

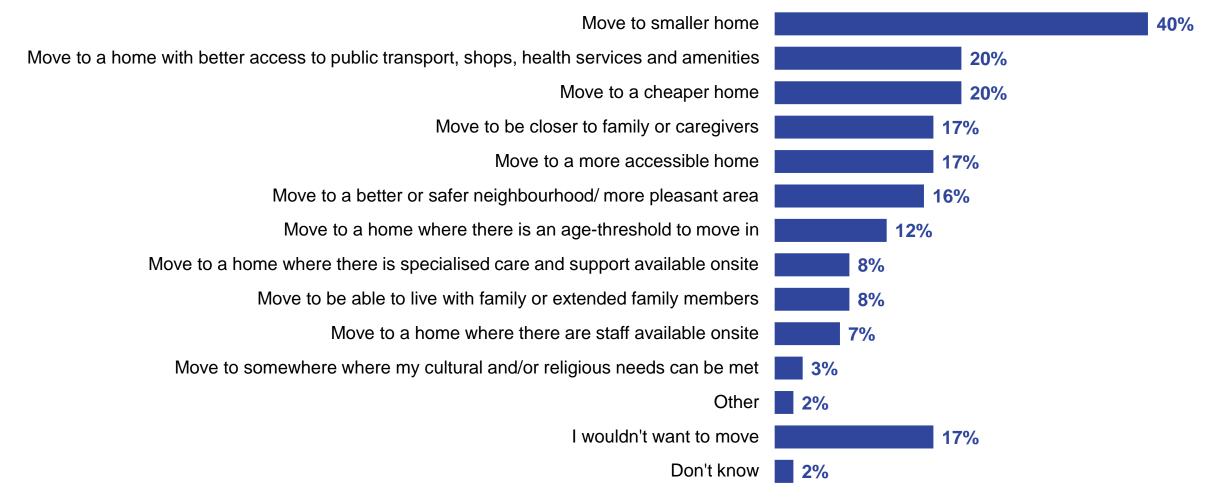

Just below a half would prefer to stay in their current home

Q23A. In planning for your future housing needs, if you had a free choice, which one of the following options would you prefer the most? / Q23B. And which, do you think is most likely? Ipsos | Understanding the Housing Preferences of Older People | March 2025 | Version 1 | Public

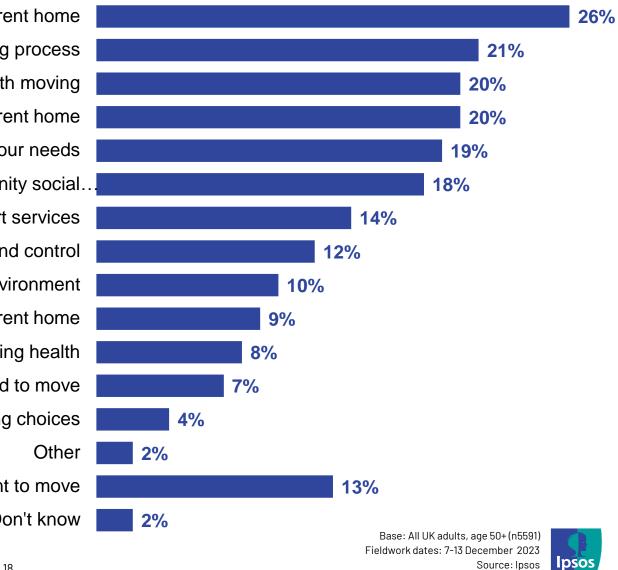

Moving to a smaller home is the most commonly mentioned reason for moving in the future

Q24. If you were to move to a different home in the future, which two or three of these, if any, are most likely to encourage you to move?

Emotional and practical factors were identified as barriers to moving home in the future

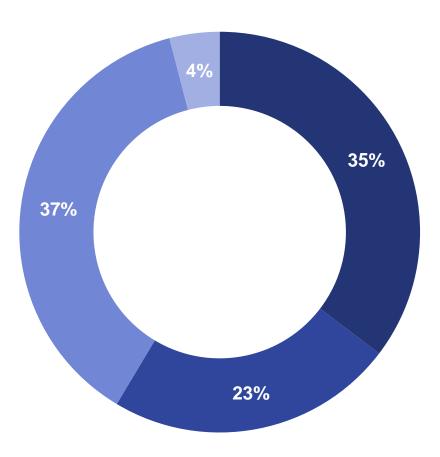

Personal attachments to current home Complexity of the moving process Costs associated with moving Being able to afford to buy or rent a different home Lack of suitable housing options to meet your needs Moving away from your family, friends, neighbours or community social... Finding a different home with access to necessary support services Loss of independence and control Fear of change moving to a new environment Limited or fixed income to be able to maintain and/or adapt a different home Physical difficulties of moving due to poor or declining health Reliance on home equity to afford to move Lack of information about housing choices I wouldn't want to move Q25. If you were to move to a different home in the future, what would you say Don't know

are the main barriers to moving, if any?

Over a third said they will only move home when they develop health conditions

- Only when I develop health problems am I more likely to move home
- I am more likely to move home before developing any health problems
- Neither

Don't know

Q32. Which one of the following statements best describes how you think about moving home?

Base: All UK adults, age 50+ (n5591) Fieldwork dates: 7-13 December 2023 Source: Ipsos

Key take outs

Older people largely express a preference to remain in their current homes, with potential adaptations if needed.

While some are open to moving to a different conventional home, with accessibility and adaptability in mind, the preference for specialist housing like sheltered, retirement or 'extra care' housing was weaker.

Concerns about future financial stability and potential health-related needs will also need to be taken into consideration

Over half said they would be concerned about their ability to afford the service charges in specialist housing. While a third said they were more likely to move home only when they developed health problems.

One of the strongest motivators for future moves will be for a smaller home

The survey also highlighted other factors that new housing solutions will need to consider. Strong personal attachments and the complexity of the moving process are prominent among these. As are financial barriers, particularly among renters and those on lower incomes.

Ultimately, a balanced approach that caters to both ageing in place while offering appealing alternatives will be paramount to effectively developing future housing options for the UK's ageing population.

THANK YOU
