Collaboration

These changes call for collaborative ways of working, yet architectural education can encourage a separation.

Staff as building users

Staff as building users tend to be overlooked, and staff spaces such as staff rooms, laundries and kitchens have received less consideration in design guidance

Education

An awareness of designing for diverse building users, including people living with dementia, should be incorporated into architectural education.

Consultation

Consultation with building users generally does not happen on projects, unless the client allocates adequate time and resources for this.

Vision

A shared sense of the vision and values of a project across the design and construction team should be embedded in the brief and developed through ongoing working relationships and practices.
